Experience

Frontend Team Lead • Vista August 2023 - Present

- Build and design high-quality dashboards for a diverse array of clients using technologies such as JavaScript, TypeScript, React, NextJS, Laravel, Code Igniter and more.
- Lead the frontend development team and architecture of technical tools like REST APIs and continuous integration pipelines to fulfill business requirement.
- Maintain project structures, ensuring codebase consistency and maintainability through thoughtful folder organization and best practices.
- Contribute to technology decisions, helping the team evaluate and choose the right stack and tools based on project goals and constraints.
- Spearhead company-wide accessibility initiatives such as creating documentation for best practices, establishing a standard accessibility checklist for developers, and facilitating knowledge shares.

Internship - Full-Stack Developer • Vista May 2023 - August 2023

- Collaborated with backend developers to design and build a web-based system that allowed users to manage and track their vehicles in real time.
- Developed features like interactive maps to visualize vehicle locations and gas refill points, as well as dashboards for tracking fuel expenses and overall usage.
- Used technologies such as JavaScript, React, REST APIs and integration with Google Maps to bring the product to life and ensure a smooth, intuitive user experience.

AI-Powered Tech Decision-Making Tool (SaaS) — In Progress

- Designing and building a SaaS platform to assist developers and teams in making smarter, data-driven technology choices
- Follows core software engineering principles: from requirements gathering and planning to iterative development, testing, and deployment
- Leverages AI to analyze project requirements and recommend the most suitable frameworks, databases, and architectures
- Integrates GPT-based recommendations to support technical decision-making with contextual insights
- Features an interactive, customizable UI for creating decision flows tailored to specific business or product needs
- Built with modern technologies focused on scalability, usability, and real-world dev workflows

Skills

Programming Languages

JavaScript (ES2018+), TypeScript, PHP, Java, Dart

Libraries & Frameworks

React, Next.js, Node.js, Flutter, React Native, TanStack Query, Auth.js, Tailwind CSS, shadcn/ui, Laravel, CodeIgniter

Databases & ORMs

PostgreSQL, MySQL, Prisma, NeonTech

Authentication & Security

JWT, Auth.js, Firebase Auth

Tools & Platforms

Git, GitHub, Vercel, Netlify, Docker, Firebase, Figma

Education

University for Business & Technology

Bachelor of Computer Science and Engineering

Interests

Web accessibility, outdoor adventures, rom-com movies and documentaries
